

What's New

October 2016

Smith V4.0

Smith-Chart

New Features:

- Tuning Cockpit: Tune element values using sliders

System requirements:

Windows Vista, Windows 7, 8, 10
.NET Framework 4.6.1 or higher

www.fritz.dellsperger.net

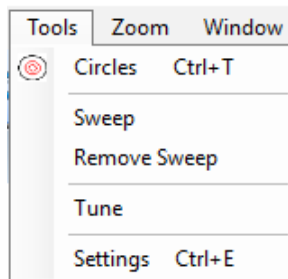

Tuning Cockpit

In addition to the manual element value editing we added a very comfortable tuning cockpit. It allows to select elements from schematic, add sliders to tune element values and simultaneously watch transformations on Smith-Chart.

Even with an active frequency sweep, all transformations are recalculated in realtime.

This gives you a very powerful tool to manually optimize your circuits.

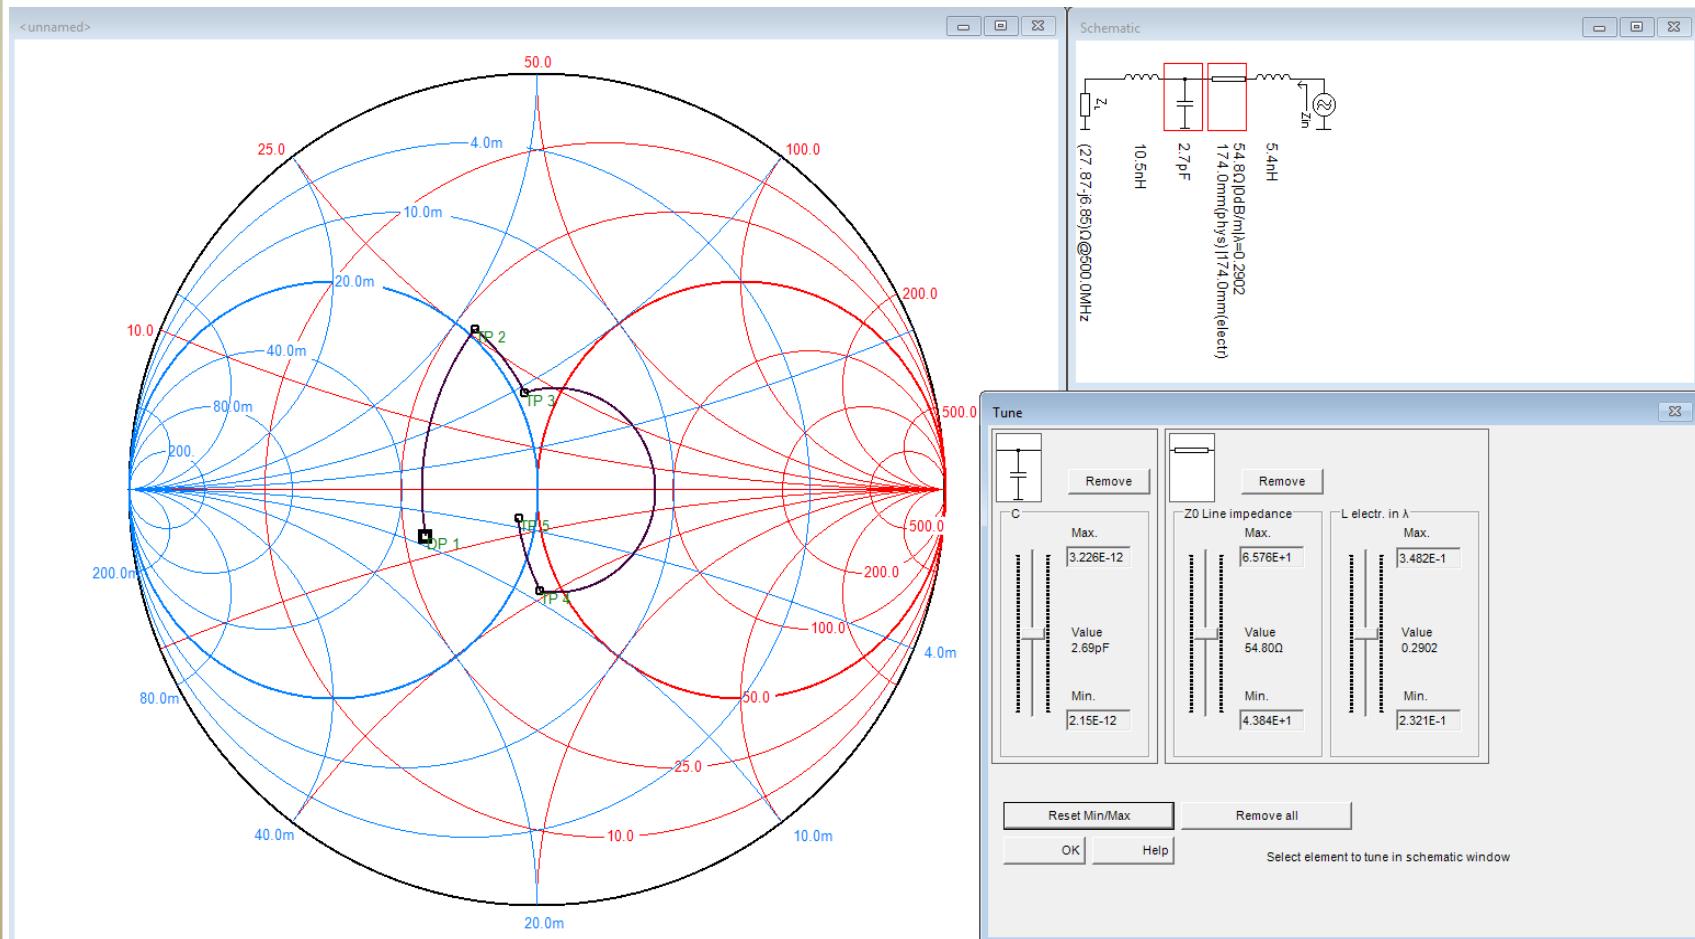

- Start tuning cockpit with “Tune”

Tuning element values

Example:

- Add elements from schematic to the tuning cockpit
- Move sliders and watch Smith-Chart

License, Demoverision and Contact

The unlicensed Demoverision allows 5 elements and 5 datapoints only. Save project and save netlist are disabled.

If you are interested in a licensed version with full capabilities send an e-mail to fritz@dellsperger.net

Commercial licenses are priced to US\$ 120

Licenses for universities, students and Ham's with callsign are priced to US\$ 80

Demoverision and additional documents related to the Smith-Chart can be downloaded at www.fritz.dellsperger.net
